

## Articulated Credit

### WHAT IS ARTICULATED CREDIT?

- The student earns college credit after completing a state-approved **occupational** program or course that addresses the same competencies as its “articulated” college program or course.
- The student is not enrolled at the college where the credit is offered.
- The student does not need to have a given GPA, test score or demonstrated proficiency to enroll in the articulated course. The **student must, however, demonstrate an 80% competency mastery upon completion of the course or program in order to earn credit.**
- College credit is transcribed after the student has completed 15 credit hours at the Metropolitan Community Colleges. The student has up to two years to benefit from credit held in “escrow.”
- At the Metropolitan Community Colleges, articulated credit is usually limited to an Associate in Applied Science (AAS) degrees, although many colleges and universities are accepting transfer of those credits. To transfer credit to a four-year degree program, articulated credit must be part of a completed AAS degree program.
- The student does not pay any college tuition or fees for articulated credit.
